Offline Android Introduction

1.01 Overview

Synactive presents Liquid UI Offline for SAP on the Android platform. This new product enables you to access your SAP ERP environments from any Android device running Ice Cream Sandwich, v4.0.1 and above. Liquid UI Offline for Android is a natively built application and does not require either web browsers or any third party middleware. In addition, Liquid UI is built on the industry-standard platform, enabling you to perform screen customizations or combine screens into a custom workflow without changing any business logic or writing any ABAP code.

You can use the power of Liquid UI Offline for Android to access SAP from mobile devices available for all employees. Whether you need to create new sales orders, approve trip requests, or monitor the status of repair orders. Liquid UI Offline enables you to create a customized interface and deploy it on your mobile devices without any internet connectivity. The Android client captures the look and feel of the platform, enabling experienced Android users to quickly adapt to the new application.

Custom enhancements leverage the lessons learned from our extensive experience in developing for mobile devices. Best of all, the Liquid UI Offline client is built on the award-winning WS platform, enabling you to deploy existing scripts on your device without any changes from the Server.

Note: You must configure the Liquid UI for Android to connect to your Liquid UI Offline Server. Please see the Liquid UI Client Configuration section for details on configuring the client. If you are using the Enterprise License, please see the Server Configuration section.
