Server Introduction

1.1 Server Overview

Liquid UI Server provides a centralized mechanism to deploy Liquid UI and to send updates without the necessity of managing individual clients. Server also serves as a central repository for a customer's Liquid UI scripts and mimics an SAP router in terms of deployment. Liquid UI Server also enables you to use custom SAP solutions on a wide variety of touch points, including iPad, iPhone, and Windows CE-based handheld devices.

The benefits provided by Liquid UI Server include a zero-footprint deployment and simplified software management. Liquid UI Server also provides central deployment and maintenance for tasks such as upgrading Liquid UI, updating current implementation or changing Liquid UI parameters. Liquid UI Server can be used in conjunction with the Desktop, Mobile and Offline solution suites. This section includes the following topics:

- Architecture
  Description and explanation of how Liquid UI Server is architected in relation to the other components of the WS platform.
- Implementations
  Available implementations using Liquid UI Server.
- Features
  Major features available with Liquid UI Server.
