# Server Configuration

# 4.01 Server Configuration

This section covers all the elements to be configured for running a Liquid UI Server. It consists of following elements:

- Client PC Configuration
  Configuring SAPGUI on the client PC.
- Using Liquid UI Server as a SAP Router
- Configuring Liquid UI Server as a Message Server
- **Server Configuration**

  Liquid UI Server is configured by means of the sapproxy.ini file. The companion SynWatchDog service is configured via the synwatchdog.ini file. For Liquid UI configuration, please see the appropriate documentation.

  - sapproxy.ini
    Explaining the sapproxy.ini configuration file.
  - guixt.sjs
    Explaining the guixt.sjs configuration file.
  - SynWatchdog
    SynWatchdog is a bundled utility for GuiXT Server.
  - Deactivate GuiXT
    You need to deactivate GuiXT in your SAP GUI as you have configured it in the sapproxy.ini file.

  - Configure guixt.sjs
    To configure more parameters under guixt.sjs file, you need to refer Configuring guixt.sjs file.

  - **Restart Liquid UI Server**

    Re-start the Synactive R/3 Proxy Service or run the **consolemode.bat** file under Liquid UI Server folder. This file is located in your local drive and path would vary depending upon the Liquid UI Server installed.

    For example:

    ```
    For 64 bit OS: C:\Program Files (x86)\Synactive Inc\GuiXTWSServer
    For 32 bit OS: C:\Program Files\Synactive Inc\GuiXTServer
    ```

- You need to check that the Client and the Server are in the **same network** to access the customized screens from the Liquid UI Server.
