Server Troubleshooting

5.1 Server Disaster Recovery Overview

Recovering from a Liquid UI Server aka GuiXT Server failure.

All customers should have a disaster recovery plan in the event that the Liquid UI Server goes down and is not recoverable. This section will cover the process to set a disaster recovery plan in place and what files are necessary. We assume a backup process is already in place where files are regularly backed up and can quickly be recovered to a different server machine.

For Liquid UI Server there are two possible recovery scenarios, which are as follows:

- 32-bit Server Recovery
  Performing recovery on a 32-bit Liquid UI Server.
- **64-bit Server Recovery**
  Performing recovery on a 64-bit Liquid UI Server.
