Web Server Appendices
6.2 Handling HTTP Errors in Web Server

You may encounter the following error when running the GuiXT Web Server:

```
error - 1 binding tcp http server
 httpsrv: accept error 10022
 httpsrv: accept error 10022
 httpsrv: accept error 10022
```

This error means that the selected webport base is already in use. To resolve this error, please do the following.

1. Open the config.js file in a text editor such as Notepad. The Config.js file is located in the following location:

   ```
   C:\Program Files\Synactive Inc\GuiXTFuzion\wwwroot\guixt4web
   ```

2. Find the following entry in the config.js file:

   ```
   const DEF_WEBPORT_BASE = "80"
   ```

3. Change the value '80' to a different port number. We recommend choosing a port that is not normally in use, such as port 85.

4. Save your changes and restart Web Server. The error should no longer appear.
