Scanguns Features

4.4 Printing with non-SAPWIN Drivers

To print from your Mobile device using drivers other than SAPWIN, you must change the SAP and Mobile device configurations described in the previous section. The configurations to be changed are listed below.

Note: If you have not already configured SAPWIN printing on your device, you must follow the instructions in the Universal Print Settings section of this document.

Liquid UI Server Settings

As in the case of SAPWIN, there are no Liquid UI Server configurations that need to be performed for printing via non-SAPWIN drivers. The only requirement is that Liquid UI Server be used as the intermediary between the Mobile device and the target printer. Printing directly to a client machine from Mobile is not supported.

- SAP Settings for Printing with non-SAPWIN Drivers
- Scanguns Settings for Printing with non-SAPWIN Drivers
