Scanguns Features

4.4.2 Scanguns Settings for Printing with non-SAPWIN Drivers

Scanguns Settings for Printing with non-SAPWIN Drivers

Once you have configured SAP, you must configure the Mobile device as well. To configure the Mobile device to print using non-SAPWIN drivers, please do the following.

1. Open the LiquidUI-Mobile.sy3 file on your system.
2. The following line in the [General] section:

   ```
   PrinterPort=COM4:
   ```

   Note: The colon at the end of the line is required. The COM port can be any number from 1-9. The only requirement is that the COM port number entered in the LiquidUI-Mobile.sy3 file must match the COM port specified in the device's Favorites. In our example, we entered 'COM4' in the Favorites, so we will enter 'COM4' in the LiquidUI-Mobile.sy3 file as well.

3. Save your changes and the changes and copy the edited LiquidUI-Mobile.sy3 file to the Liquid UI Handheld Scanguns folder on the device.
4. Your Mobile device is now correctly configured to print using non-SAPWIN drivers.
