Designer Features
5.02.11 Viewing SAP HTML Properties

The properties dialog for the html element contains a single tab, as follows:

- Html file

You can modify the properties for the html element from this dialog box. The tabs are more fully explained below.

Html file

The Html file tab appears as shown below.

The available parameters are as follows.

Html file or URL

Specifies the HTML file location. You can enter either a path or a URL in this field.

Designer Features

Template file

if you are using a template file, enter the file path in this field.

Display this as a floating window

Check this box to display the HTML file as a floating window, instead of being anchored to a specific location.

Maximize the window

Check this box to maximize the size of the window. This option is only available if you select the 'Floating' option described above.
