Generating SAP Scripts in Workbench Running Scripts
4.1.2.1 Excel Sample Data for SAP

When Workbench generates an Excel spreadsheet, it automatically includes sample data based on the values entered during the transaction recording. An example is shown below:

This sample data is explained as follows:

- Each field where data was entered during the recording appears as a column in the Excel template.
- The first row of the sheet is populated with the exact values that were entered during the recording.
- If any values are numeric, they are stored as text. This will be noted in the spreadsheet.
